On all IBiS, label ANt, POST, LAT, MED, & everything else you can.
Anatomical labels on the image include:
- Posterior interosseous nerve
- Extensor digitorum communis
- Extensor pollicis longus
- Radial nerve
- Lateral intermuscular septum
- Extensor pollicis brevis
- Abductor pollicis longus
- Extensor carpi radialis longus
- Extensor carpi ulnaris
- Pronator teres
- Median nerve
- Flexor carpi radialis
- Flexor carpi ulnaris
- Pronator quadratus
- Radial artery
- Pronator teres
- Anterior interosseous nerve
- Abductor pollicis brevis
- Extensor pollicis longus

The diagram is labeled as 'Anatomical Profile - Section A or B (next page) more proximal'.
Label all you can.

Antebrachia — is section A (previous page) or B more proximal?

Look for sperm whale it goes around ulna.

Flexor digitorum profundus

Flexor carpi ulnaris

Ulnar N.

Basilic V.

Post. interosseous AV

Vena interossea membrane

Extensor carpi ulnaris

Extensor Pollicis Longus

Flexor digitorum superficialis

Flexor carpi radialis

Antebrachial fascia

Hypodermis

Cephalic V.

Superficial radial N.

Brachioradialis

Pronator Teres

Radial AV

Extensor Carpi Radialis Longus

Extensor Carpi Radialis Brevis

Flexor Pollicis Longus

Median N

Styloid process of radius

Ante- interosseus AV

Abductor Pollicis Longus

Extensor Digitorum

Medial epicondyle (lat.)

Radius

Median N

Radic. N. (deep)
Label everything (incl. Med, Lat, Post, Ant). Can you find the error?

This is DISTAL Articulation.
